

## MIRROR SPECIFIC ASSEMBLY INSTRUCTIONS:

1. Disconnect at the main switch of the electrical installation, the voltage power supply before mounting and before any other maintenance work on the lighting fixture.
2. Place the light fixture on the mounting surface and fix it with the corresponding screws.
3. Connect the output cables of the lighting device to the general power cables (230 V~) through a Korner s.r.l. mod. 603, IP44 or similar but with the same characteristics, paying attention that the conductors correspond (brown line and blue neutral line).
4. Reconnect the power supply from the installation's main switch.
